

module-09_1

[module 09: diving deeper, working with fragment, portals & _refs]

Project Name: Practice Project

Description: simple project, take inputs & shows info,

Fragment

```
<React.Fragment> </React.Fragment>
```

```
<> </>
```

& Portals

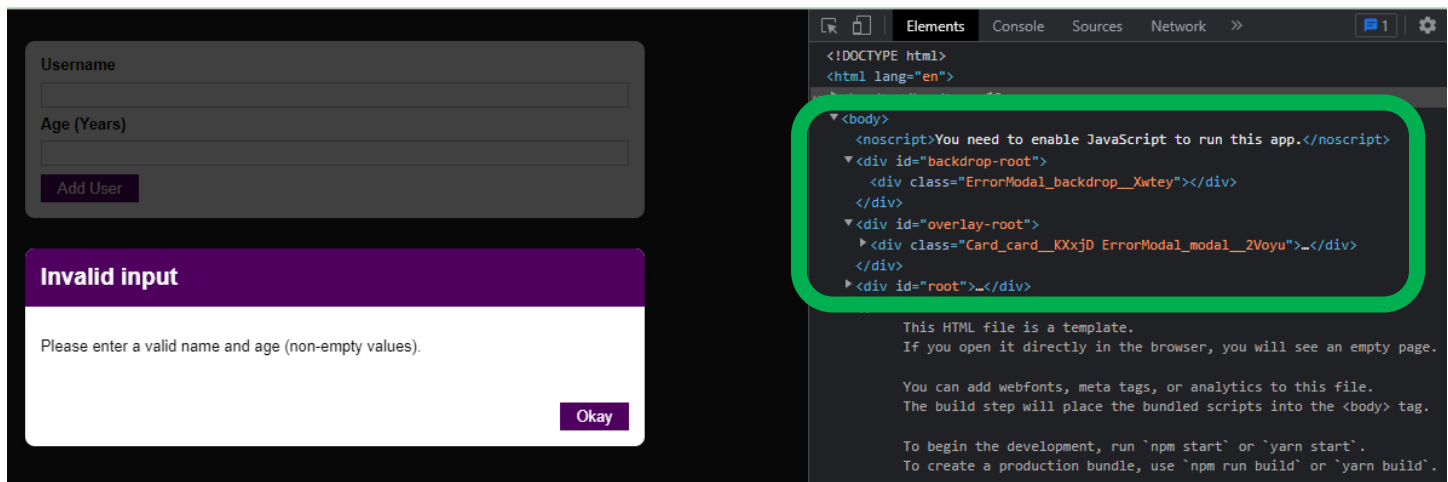

**** using state for form input is a controlled approach****

In module-09_1, state is used, so, its controlled approach.

**** using ref hooks for form input is an uncontrolled approach****

open a modal & backdrop for wrong input & shows error message.

here, portals are used for Backdrop & Modal. Inspecting the page, we can see div for different portals.
