

## module-09\_2

[module 09: diving deeper, working with fragment, portals & \_refs]

Project Name: Practice Project

Description: simple project, take inputs & shows info, open a modal & backdrop for wrong input & shows error message.

### Fragment

```
<React.Fragment> </React.Fragment>
```

```
<> </>
```

& Portals

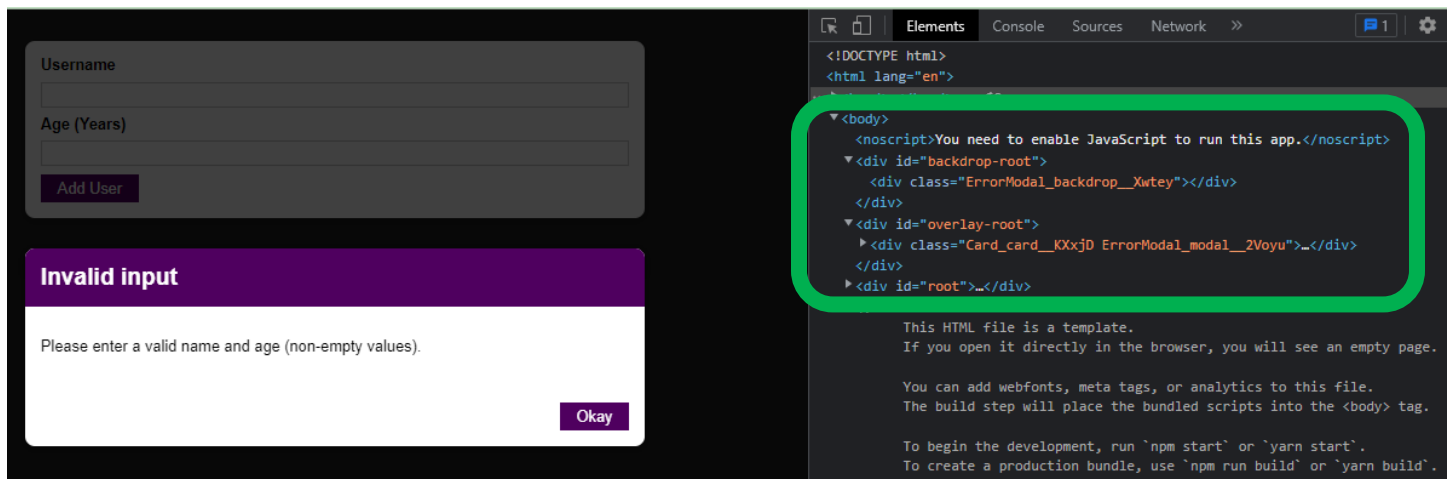

**\*\* using state for form input is a controlled approach\*\***

**\*\* using ref hooks for form input is an uncontrolled approach\*\***

In module-09\_2, ref is used, so, its uncontrolled approach.

open a modal & backdrop for wrong input & shows error message.

here, portals are used for Backdrop & Modal. Inspecting the page, we can see div for different portals.
