

## Module: 06\_2

[module 06: styling CSS components using css module]

Project Name: Course Goal

CSS module is used here,  
checkout CourseInput.js & Button.js for details,,,

Course Goal

Add Goal

Do all exercises!

Finish the course!

```
...
<noscript>You need to enable JavaScript to run this app.</noscript>
<div id="root">
  <div>
    <section id="goal-form">
      <form>
        <div class="CourseInput_form-control_evmtJ false">...</div>
        <button type="submit" class="Button_button_ydtbz">Add Goal</button>
      </form>
    </section>
    <section id="goals">...</section>
  </div>
</div>
<!--
  This HTML file is a template.
  If you open it directly in the browser, you will see an empty page.
html body div#root div section#goal-form form button.Button_button_ydtbz
```

Let's see the button class.

css module gives a unique value to the button,  
component name => our class name => unique class name
